

Increasing prices for aluminium extruded profiles

In spite of stable US\$-rates for aluminium alloy at the London Metal Exchange for the last 12 months some other parameters cause a price increase for extruded aluminium profiles.

The weakness of the EURO-currency compared with US\$ is one cause. Furthermore there has been a massive price increase for aluminium billets in 2014 with direct effects on the price for extruded profiles.

Compared with the situation one year ago you have to consider approx. 20% higher prices for the material cost of heat sinks for new contracts signing in February 2015.
